- Process for producing foamable crosslinked polymers, characterized in that a mixture composed of
 - (A) 30-70 parts by weight of methacrylic acid,
 30-60 parts by weight of methacrylonitrile,
 0-30 parts by weight of other monomers having vinyl unsaturation,
 - (B) 0.01-15 parts by weight of tert-butyl methacrylate and/or tert-butyl acrylate,
- (C) 0.01-10 parts by weight of blowing agent,
 - (D) 0.01-10 parts by weight of crosslinking agent,
- (E) 0.01 to 2 parts by weight of polymerization initiators and
 - (F) 0 to 20 parts by weight of conventional additives
- is polymerized in bulk to give a sheet which, where appropriate, is heat-conditioned and then is foamed at temperatures of from 150 to 250°C.
- 2. Process for producing foamable crosslinked polymers
 30 according to Claim 1, characterized in that 0.014.99 parts by weight of tert-butyl methacrylate
 and/or tert-butyl acrylate are used.
 - 3. Foamable crosslinked polymer composed of
 - (A) 30-70 parts by weight of methacrylic acid,30-60 parts by weight of methacrylonitrile,

- 0-30 parts by weight of other monomers having vinyl unsaturation,
- (B) 0.01-15 parts by weight of tert-butyl methacrylate and/or tert-butyl acrylate,

5

- (C) 0.01-10 parts by weight of blowing agent,
- (D) 0.01-10 parts by weight of crosslinking agent,
- 10 (E) 0.01 to 2 parts by weight of polymerization initiators and
 - (F) 0 to 20 parts by weight of conventional additives.

15

4. Foamable crosslinked polymer according to Claim 3, characterized in that 0.01-4.99 parts by weight of tert-butyl methacrylate and/or tert-butyl acrylate are used.

- 5. Poly(meth)acrylimide foam, characterized in that it is obtained via foaming of polymer according to Claim 1 or 2.
- 25 6. Laminated material comprising a layer of a poly-(meth)acrylimide foam according to Claim 5.
- 7. Motor vehicle, rail vehicle, watercraft, aircraft, spacecraft, characterized in that it is composed entirely or to some extent of a poly(meth)acrylimide foam according to Claim 5.
 - 8. Machine component, characterized in that it is composed entirely or to some extent of a poly-(meth)acrylimide foam according to Claim 5.
 - 9. Antenna, characterized in that it is composed entirely or to some extent of a poly(meth)acrylimide foam according to Claim 5.

10. X-ray table, characterized in that it is composed entirely or to some extent of a poly(meth)acrylimide foam according to Claim 5.

5

- 11. Loudspeaker, characterized in that it is composed entirely or to some extent of a poly(meth)acrylimide foam according to Claim 5.
- 10 12. Pipe, characterized in that it is composed entirely or to some extent of a poly(meth)acrylimide foam according to Claim 5.
